Injectable Product Guide

B12 (Methylcobalamine) - a nutrient that helps keep your body's blood and nerve cells healthy and helps make DNA, the genetic material in all of your cells. Vitamin B12 also helps prevent megaloblastic anemia, a blood condition that makes people tired and weak.

LIPO B (B12, Methionine, Inositol, Choline) - B12 aids in energy production by converting carbs into glucose. Methionine helps break down sugars and carbohydrates and convert them into energy. Inositol converts food into energy. Choline cuts muscle recovery time and helps convert fat into energy.

LIPO Ultra (LIPO B with B1, B2, B5, B6) - LIPO B plus; B1 (Thiamine) which improves your immune system and helps convert fat and carbs into energy. B2 (Riboflavin) which increases metabolism and supports your immune system. B5 (Pantothenic Acid) plays a role in the breakdown of fats and carbohydrates for energy, and is critical to the manufacture of red blood cells, as well as sex and stress-related hormones produced in the adrenal glands, small glands that sit atop the kidneys. B6 (Pyridoxine) promotes red blood cell production and converts food into energy.

Vitamin D3 - Vitamin D3 is paramount for a healthy immune system, as well as bone and nerve health. Vitamin D allows for more efficient absorption of calcium, which helps keep bones healthy. Vitamin D deficiency has been associated with increased risk of death from cardiovascular disease, cognitive impairment in the elderly, and severe childhood asthma and cancer.

Tri-Immune Boost (Glutathione, Ascorbic Acid, Zinc) - Tri-Immune Boost is a power packed blend that is the ultimate immune system enhancer. This high concentration blend of immune system boosting essentials helps maintain a healthy immune response, decreases inflammation, optimizes healthy cell function, aids in wound healing, as well as strengthens weakened immune systems.

Amino Blend (Glutamine, Arginine, Ornithine, Lysine, Citrulline, Carnitine) - Amino Blend can help boost your metabolism, improve energy levels, increase endurance, and help to burn fat. It also provides your body with essential and non-essential amino acids to promote overall health.

Biotin - Biotin is important for overall health, and plays a role in cell growth, carbohydrate metabolism, and fatty acid synthesis. Biotin may improve conditions such as skin rashes, brittle nails, thinning hair, diabetes, or nerve pain. May help speed up weight loss, reduce inflammation, improve acne and eczema, cognitive function and help lower blood glucose in patients with diabetes.

Glutathione - Glutathione protects cells from free radical damage and helps improve cellular function at all levels (immune function, hormone levels, mitochondrial function, etc.) As people develop chronic illness, glutathione levels decrease. Glutathione is a powerful antioxidant and is beneficial for many disease states as well as helping people live a healthier life. It may improve immune response, help to metabolize toxins and activate enzymes, aid in liver in metabolizing alcohol, reduce the amount of fat stored in the belly, help reduce oxidative stress, and improve complexion.

NAD+ (Nicotinamide Adenine Dinucleotide) - NAD+ is a coenzyme found in all living cells that is essential in key physiological processes in our bodies. As we get older NAD+ production slows down, leading to mental and physical fatigue. Some of the benefits of NAD+ are an increase in energy levels, enhanced mood and mental clarity, reduced fatigue, reverses the visible effects of aging, restores muscle and athletic performance, repairs DNA, and restores brain chemistry and neurotransmitter function. NAD+ also improves overall physical appearance, health, and quality of life.
